Learning curves: 134 samples, 35 groups with QC pairs kept together
3 outer folds × 2 repeats; 2 inner folds; training-site subsets at 50%, 75%, 100%
ammonia toxicity
Equal-site log-loss (lower is better)
Mean training site groups
5/6 fits
5/6 fits
Log-contrast ridge: test
Log-contrast ridge: train
Adaptive fusion: test
Adaptive fusion: train
ammonia toxicity
Pooled outer-CV AUROC (higher is better)
Mean training site groups
1 repeat
1 repeat
1 repeat
1 repeat
Log-contrast ridge
Adaptive fusion
XGBoost, matched taxa
XGBoost, flat genus
acid base balance
Equal-site log-loss (lower is better)
Mean training site groups
5/6 fits
